#### Background

- The work-up process for living donor candidates is often long and inefficient
- A better process can improve patient experiences, outcomes, and reduce healthcare costs

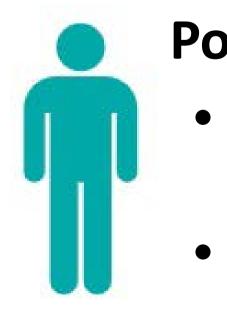

#### **Research Question**

How can we improve the efficiency of the living donor evaluation?

Can a multi-component quality improvement intervention increase access to kidney transplantation and living kidney donation for patients with kidney failure?

**Ontario Renal Network** 

Strategy for Patient-Oriented Research

Development of quality improvement intervention

### **Project Goal**

- Better understand current processes
- Survey stakeholders to develop quality measures and solutions

### Population

 Patients (living donors & recipients) + healthcare professionals across Canada

# months earlier:

- Healthcare costs
- Time on dialysis

## **Theme 2 – Improve Access to Kidney Transplantation and Living Donation**

#### **Project Goal**

- Annual rate LKD in Ontario by > than 20% by 2021
- Kidney transplants (living and deceased)
- **Kidney transplant referral**
- Living kidney donor candidate referrals

#### **Trial Logistics**

- Randomization balancing on baseline measures
- Usual care will receive strategy in Spring 2021

#### **26 CKD Programs** Randomized (Cluster)

Multi-component strategy

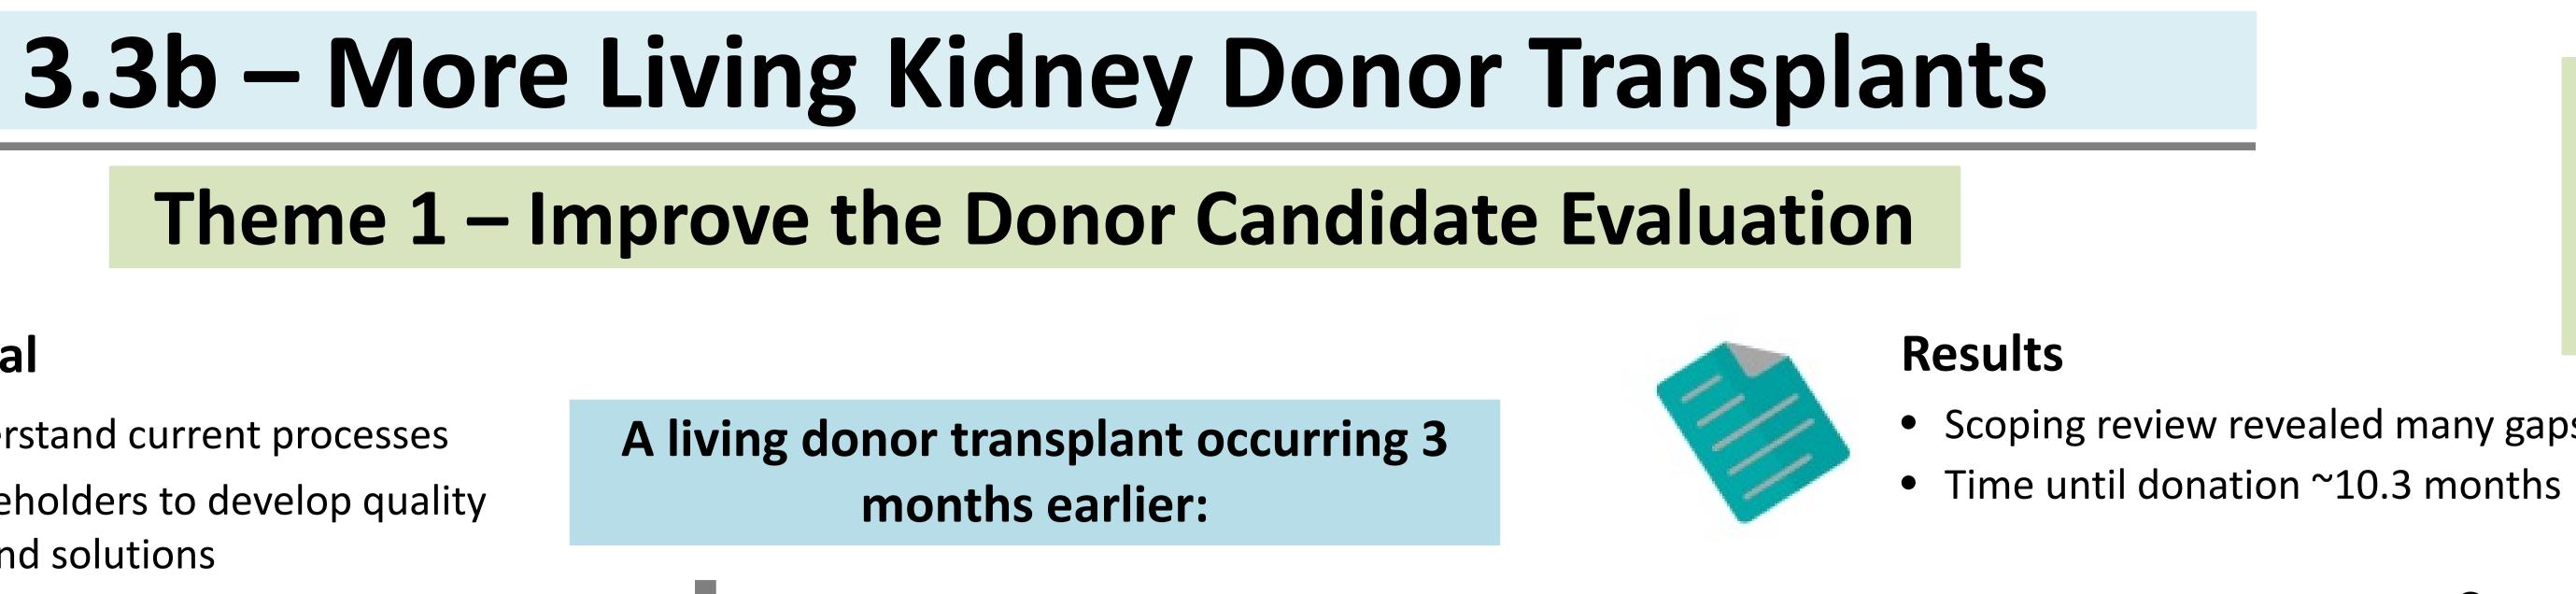

#### Population

- All 26 CKD programs + 6 adult transplant centres in Ontario
- ~27,000 patients (16,000 in multi-care clinics and 11,000 on dialysis)

**Project Timeline** 

Intervention ongoing 2017 2016 (2017 - 2021)November 1, 2017 Start of Intervention at

13/26 CKD programs

Living donor transplant rates

2019

#### **Multi-Component Strategy**

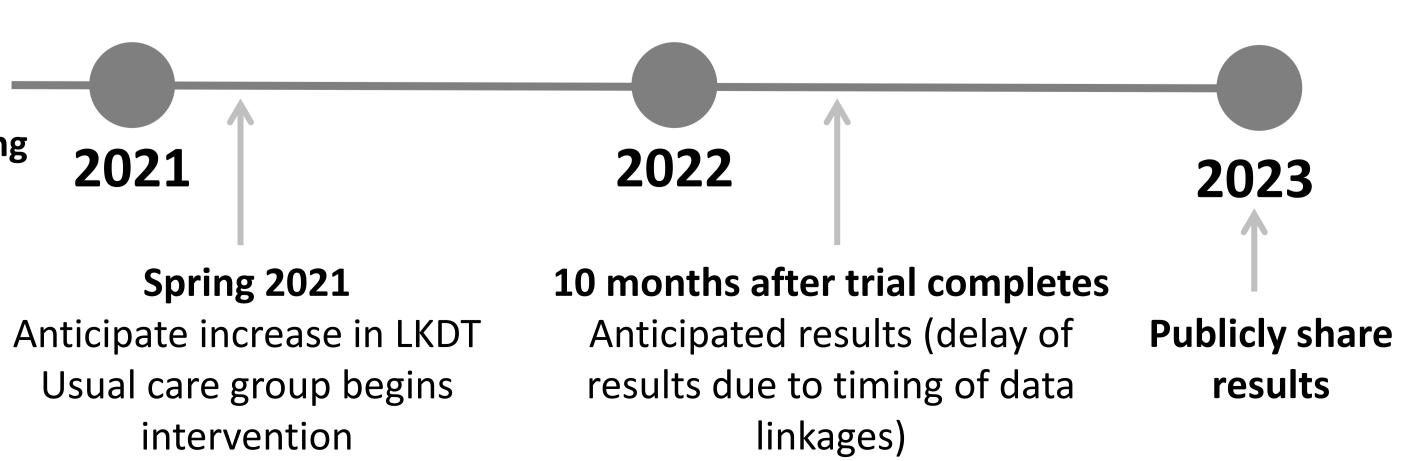

Quality Improvement (QI) Teams at 13 CKD Programs

- **Data** (e.g., reports to programs about transplant performance)
- **Education** (e.g., education toolkits for staff, patients and families)
- Transplant Ambassador Program (TAP) (e.g., kidney transplant recipients and LKD discuss transplantation/donation with patients)
- Administration (e.g., provincial administrative/financial support)

Usual care

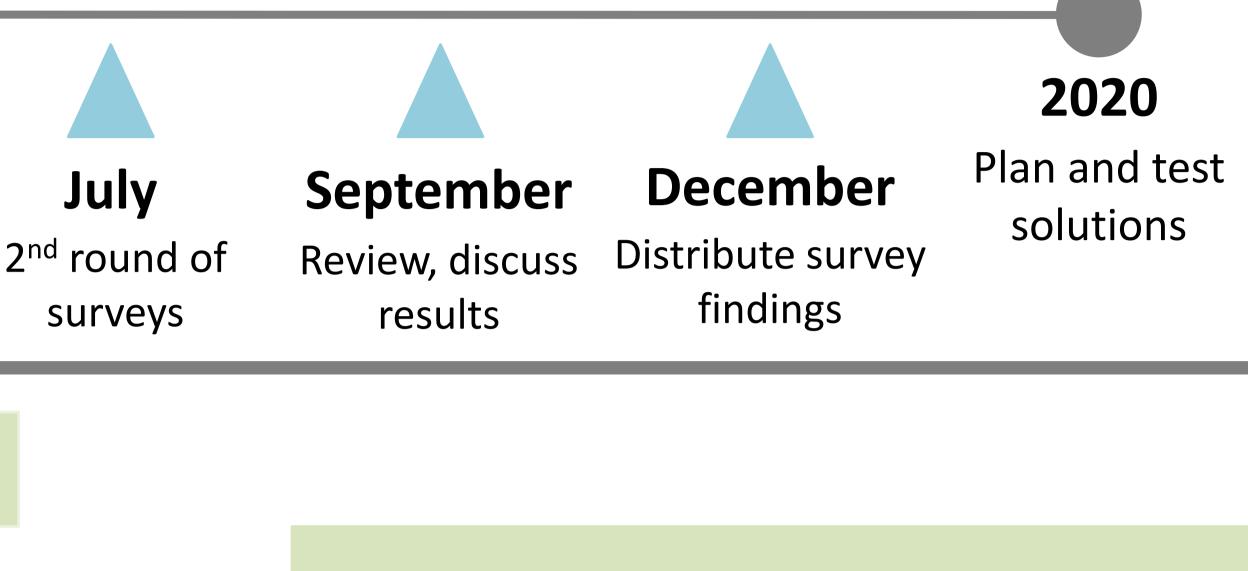

#### **Role of Patient Partners**

 Led team to research this topic; helped conduct studies and interpret results

• Scoping review revealed many gaps in the literature

#### **Survey Timeline**

#### **Role of Patient Partners**

- Ontario Patient Round-table in March 2016 to understand barriers and solutions to LKDT
- TAP was developed and is led by patients
- Partners in CKD program QI teams who address barriers to transplant
- Partners in Provincial Governance

#### Progress

- Data reports going to CKD programs
- > 200 staff have attended educational webinars
- 76 active Transplant Ambassadors
- > 1700 meaningful TAP interactions with patients
- 205 meaningful TAP interactions with potential living donors
